

Proof of Intelligence (POI)

Don't tell us you're intelligent. Show the trace. A verifiable talent & hiring network that replaces resume-first screening with live, evidence-based evaluation.

The problem: Hiring is broken

- AI-generated resumes and portfolios undermine the signal of claims — credentials no longer prove ability.
- High-volume fatigue: roles get hundreds of low-quality applicants in minutes, forcing blunt, error-prone filters.
- No real-time proof: platforms provide no immutable record of how candidates think or solve problems under realistic conditions.

Our solution: Live, verifiable assessment

POI introduces synchronized Logic Rooms — real-time, multi-tenant collaboration where performance is generated, recorded, and verified.

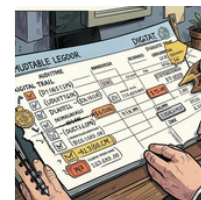

Live coding & execution

Lock-free, simultaneous execution with sandboxed runtimes (Python / TypeScript). See the code run as the candidate thinks.

Integrated whiteboard & notes

Rich-text notes and sketches persist alongside code — contextual evidence of reasoning, not just final answers.

Evidence-based ledger

Every session emits an immutable trace — a tamper-evident record recruiters can audit to verify authorship and workflow.

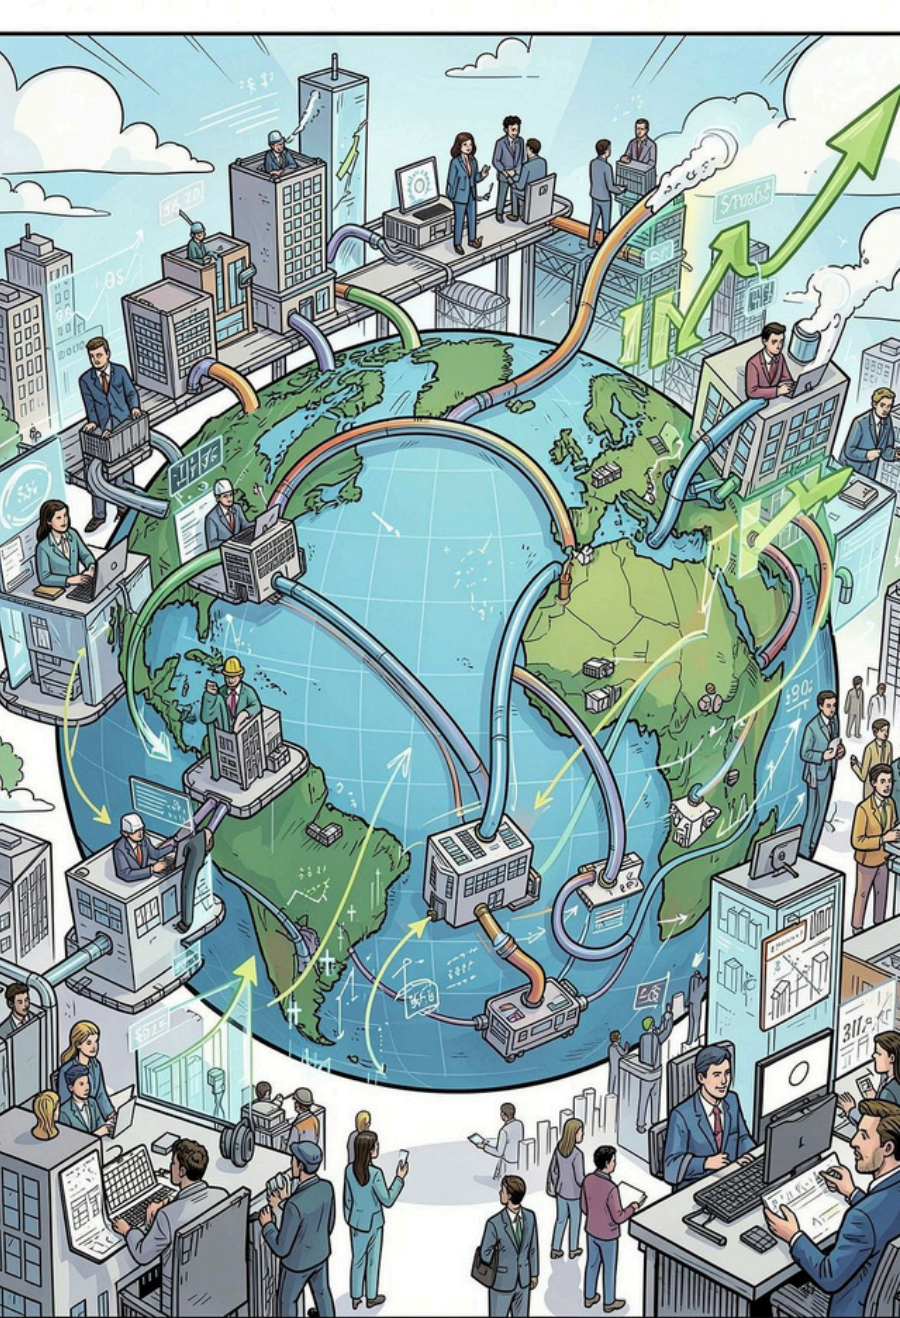

Product architecture & traction

Built end-to-end by a solo technical founder. Production components include:

- Realtime sync via efficient WebSocket mesh
- WebRTC for low-latency audio/video collaboration
- Sandboxed, reproducible runtimes for safe code execution
- Global leaderboards and recruiter search surfaced from verified traces

Early pilot metrics (internal): rapid assessment cycles, reduced time-to-hire in tests, and high recruiter confidence from auditable sessions.

Why now — market opportunity

Generative AI has accelerated the decoupling of credentials from ability. Employers need verifiable evidence. POI targets the multi-billion-dollar global recruitment and professional networking market with an architecture that scales beyond software roles to professional domains across industries.

Addressable market

Enterprise hiring, recruitment platforms, and assessment tooling — high-ASP B2B buyers.

Expansion pathways

From engineering to product, design, data science and corporate functions via domain-specific problem templates.

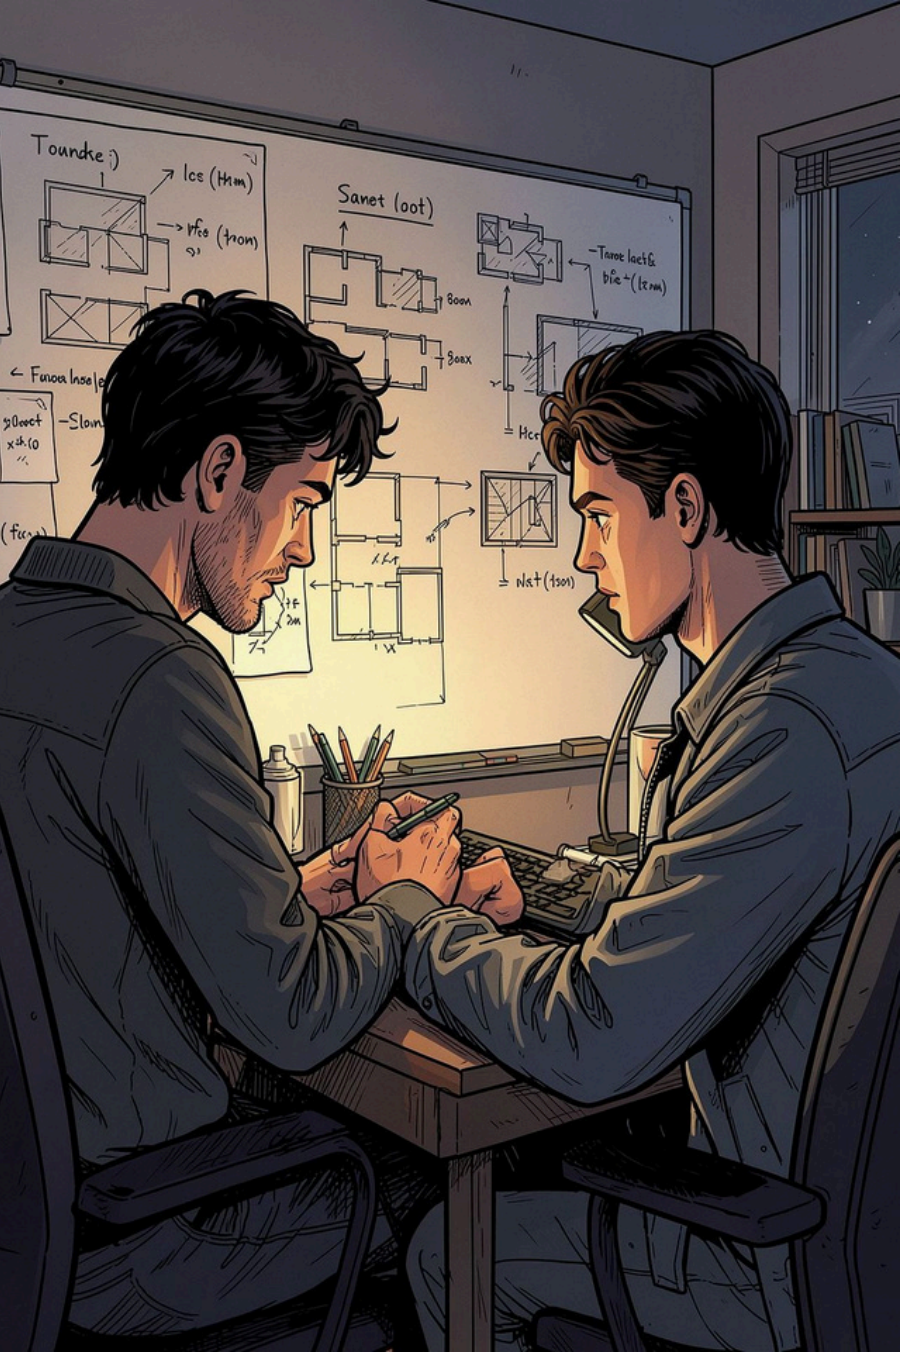

Business model & GTM

Primary revenue: B2B SaaS subscriptions for enterprise hiring pipelines and recruiter tooling.

- Enterprise seats & private company rooms
- Advanced search & verified talent indexing
- Premium audit and compliance packages

Go-to-market:

1. Direct pilots with recruitment agencies and enterprise TA teams
2. Case studies proving reduced time-to-hire and higher hire quality
3. Platform sales and integrations (ATS, HRIS)

Founder & traction

Solo technical founder: built the distributed system, realtime sync, and sandboxed runtimes end-to-end. Deep experience shipping low-latency systems and secure execution environments.

1

Proofs of concept

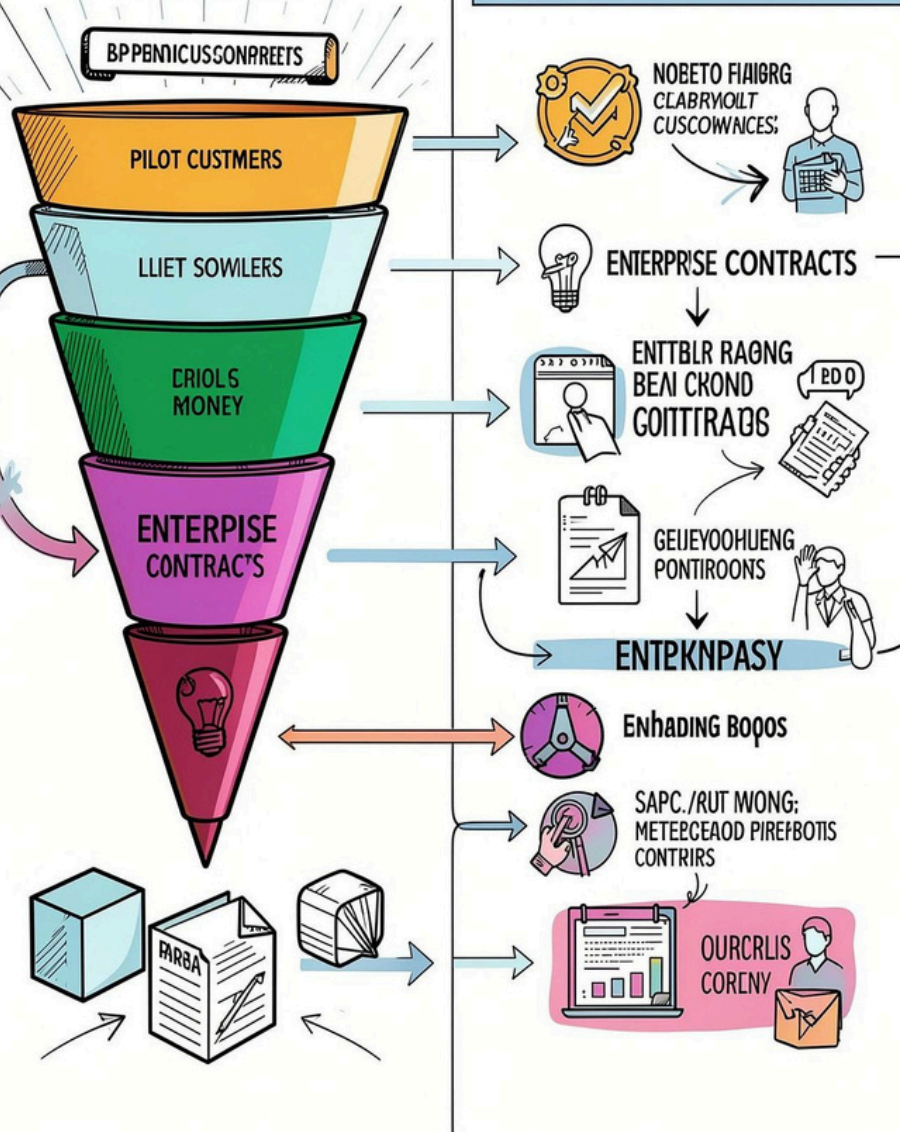

Multiple internal pilots with recruiter workflows; visible improvements in screening quality.

2

Technical milestones

Stable multi-tenant sessions, deterministic sandboxing, and auditable ledger for sessions.

PILOT CUSTOMER'S FURNISERS'

PILOT CONTRACTS

Go-forward plan & metrics

90-day plan:

1. Close 3 private pilots with recruitment agencies
2. Instrument success metrics: time-to-hire, quality lift, and recruiter satisfaction
3. Onboard early paying pilots and iterate product

12-month outcomes:

- Platform-ready product, enterprise security & compliance
- Initial ARR from pilots → seeded enterprise contracts
- Hiring for core roles via verified POI network

The ask

Seeking pre-seed partnership and accelerator placement to convert pilots into enterprise customers. Specifically:

What we need

- Entry into a top-tier incubator / accelerator
- 3–6 months living stipend to stabilise runway
- Introduction to technical co-founders and enterprise GTM advisors

What we offer investors

Founder-built, production-ready system; defensible evidence ledger; early pilot momentum in a market hungry for verification.
